

How to Join HCP-Users or HCP-Announce Google Groups (with or without a Gmail Account)

Anyone interested may join the public **HCP-Users (discussion forum for all things HCP)** or **HCP-Announce (no-reply announcement list)** Google groups hosted at:

HCP-Users: <https://groups.google.com/a/humanconnectome.org/d/forum/hcp-users>

HCP-Announce: <https://groups.google.com/a/humanconnectome.org/d/forum/hcp-announce>

You may have been signed up for one or both of these Google groups by filling out the form on <https://www.humanconnectome.org/contact-us> long ago or more recently. If you did, we migrated your account from Mailman (our old listserv) and you will still receive messages from both lists and can still post to HCP-Users, depending on which list(s) you are subscribed to.

However, if you did not subscribe to the list(s) with a Gmail account, **you will need to set up a Google account for the email you subscribed to the list with** (often your institutional email rather than a Gmail account) for you to be able to see HCP-Users or HCP-Announce listed as "My Groups" in the Google Groups UI or change your list settings (e.g. digest vs. messages as they are sent).

Below are steps to create a Google account with a non-Gmail email address to enable these account settings. In addition, you can find the steps for managing subscriptions.

If you have questions, please feel free to email Jenn Elam at elam@wustl.edu

About

Welcome to the HCP-Users Google group, which is the primary forum for discussions of topics relevant to the Human Connectome Project (HCP) and Connectome Coordination Facility (CCF).

This includes threads relevant to the HCP-Young Adult (HCP-YA) original dataset of 1200 healthy adults ages 22-35, all processing and analysis methods/pipelines developed by HCP, the HCP Course, Connectome Workbench visualization and analysis software (wb_view and wb_command), and the Brain Analysis Library of Spatial maps and Atlases (BALSA) database.

Also, any discussion of released and soon to be released datasets from the Lifespan HCP projects (HCP-Development, ages 5-21, and HCP-Aging, ages 35-100+) and Connectomes Related to Human Disease projects (CHRD, see humanconnectome.org) and associated documentation, pipelines, etc.

Joining a group

Once you have a Google account attached to your desired email address for receiving messages and have signed in, you can join each group with that email address/Google account.

Go to: [hcp-users home](#) or [hcp-announce home](#)

Click on the 'Join group' button.

The screenshot shows a Google Groups interface for the 'HCP-Users' group. The page is divided into a left sidebar and a main content area. The sidebar includes navigation options like 'My groups', 'Home', 'My discussions', and 'Starred'. A 'Favorites' section contains a yellow callout box: 'Click on a group's star icon to add it to your favorites'. The main content area features a header with 'Groups', 'NEW TOPIC', a refresh icon, 'Mark all as read', and 'Filters'. Below this, the group name 'HCP-Users' is displayed as 'Shared publicly' with '60 of 92 topics (92 unread)' and a 'Join group' button. The main text is a welcome message: 'Welcome to the HCP-Users Google group, which is the primary forum for discussions Coordination Facility (CCF). This includes threads relevant to the HCP-Young Adult (HCP-YA) original dataset of 1 developed by HCP, the HCP Course, Connectome Workbench visualization and anal; Spatial maps and Atlases (BALSA) database. Also, any discussion of released and soon to be released datasets from the Lifespar 100+) and Connectomes Related to Human Disease projects (CHRD, see humancon'. Below the text is a list of topics, with the first one, 'Problem Adding Subcortical Labels to Generate CIFTI Label File (2)', highlighted with a green border. The second topic, 'averaged rfMRI per group of age (1)', is also visible. The bottom of the page shows a Google search bar and a user profile icon.
